

The Light

Yibing Qiu
yibing.qiu@hotmail.com

Abstract: statement of light is just one kind of waves

Main viewpoints and conclusions:

In electromagnetic spectrum, Cosmic rays (composed primarily of high-energy protons and atomic nucleus); Alpha rays; Beta rays and Gama rays are not could be called “light” due to themselves all are entity particles.

The fundamental nature of visible light is heat radiation.

Light does not have the properties of both waves and particles; light is one kind and form of *Energy stream (Matter waves)*; and just having only attribute of wave.
