Abstract: show the viewpoint with regards to first big question facing physics and science

Main viewpoint and conclusion:

The main goal of physics is to understand how the Universe behaves. [1]

The first big question facing physics is that what is the Universe made of? [2]

Physics will not be complete until it can explain not just the behaviors of space and time, but where these entities come from. [3]

Combined above, obtained the first big question facing physics and science: What Is the Universe's basic structure? What Is the Universe made of? and, Where these entities come from?
